Secure IV Solution Cart

The Starsys Secure IV Cart creates an inventory replacement system of pre-stocked totes. Full extension drawers allow for solution bags to be stored standing up or lying down while providing complete access to the product. A lockable clear door provides for visual inventory while holding contents secure. Solid enclosure panels and door protects contents from splashes or other potential contamination. Constructed of durable corrosion-proof polymer panels that are easy to clean and won't chip, rust or dent, the carts 58-inch height, lighter polymer design and 8-inch casters allow for safer transport.
