

Smoke Evacuation Products

Surgimedics offers a line of high quality products that clear away surgical smoke and promote greater visibility at the surgical site. The Surgimedics Smoke Evacuator is used to remove odors and gases released into the air during laser and electrosurgical procedures. Surgimedics has just released a new eight page brochure, *Clearing the Air for Safer Surgery*, that summarizes the essential features of all their products; including smoke evacuators, filters, pre-filters, wall suction units, tubing, adapters, reducers, and accessories. Surgimedics also offers very attractive prices on replacement filters for competitive smoke evacuator units; such as, Buffalo Filter, Stackhouse, and Niche Medical.
