

Patient Weighing System

The MODELS 6202 & 6202D STOW-A-WEIGH SCALES mount snug against the wall and protrude only four inches when not in use. The scales are designed for stand-on weighing, wheelchair patients, and will even accommodate patients on stretchers. They are particularly well suited for high traffic areas or where floor space is limited. These battery-operated digital scales automatically turn on and zero when the platform is lowered. Shut-off is automatic. With weighing platforms a mere one and a half inch high, patient access is easy and convenient.
