

Digital Operating Control System

CompView Medical's Digital Operating Control System (DOCS)[®] is a suite of state-of-the-art integrated audio, video, communication and control systems designed specifically for the surgical environment that provides surgeons, nurses and staff with optimum audio-visual control and communication capability. The DOCS features a digital capture and display system, an integrated audio and videoconferencing system, as well as dual x-ray and video display. In addition, it allows for centralized room control, covering such things as lights, sound, paging, audio conferencing, and display control. The system further offers videoconferencing capability for distance learning or consultation, digital record and print capability, and network interface of the operation room to the hospital system.
