

Carbon Fiber Couchtop

The Elekta Couchtop for Elekta Precise and Synergy bases is manufactured from low-profile carbon fiber, making it radiation friendly for all treatment planning needs. This couchtop comes standard with a grid panel, Type-S#153 Head extension and Elekta Synergy basic calibration kit mount. It replaces the existing metal C-Arm table frame with a carbon fiber couchtop, eliminating the restrictions metal frames put on treatment fields. The new couchtop allows for accurate patient positioning with the use of the 2-pin Lok-Bar#153 along with MEDTEC® and SINMED® patient positioning devices.
