

High Intensity Surgical Light

The 600-mm Stryker Visum® 600 Surgical Light combines easy maneuverability with high shadow resolution. The high intensity from a low wattage bulb, combined with a high quality aluminum hood for optimum heat dissipation, minimizes heat generation in the surgical field. When positioned at the ideal distance from the surgical field, the light provides a 28-inch solid column of light that should not have to be adjusted during surgery. Also, the Visum 600 can be equipped with a StrykeCam® In-Light Camera for optimal viewing during surgeries.
