

Laparoscopic Instrument System

The Versatile[®] Laparoscopic Dissection System is built around a patented blunt dissection instrument that can provide safe and effective dissection on the most delicate tissues, similar to that achieved with a "peanut" or Kittner in open surgery. Combined with the other system elements, instrument exchange is virtually eliminated. The Versatile System includes a dissection instrument, a suction/irrigator and an electrosurgical instrument, all customized to work together in a one-handed operation. The ergonomic integration of the system elements reduces hand fatigue and improves operational efficiency.
