

Medical Keyboard

The SLK-101-FL medical keyboard has both backlighting and a large numeric pad. Resistant to dust, water and corrosive liquids, it is constructed using a fully sealed, industrial silicone keypad. Its low-profile keys provide for easy cleaning/disinfecting by eliminating the difficult to clean spaces of office-grade keyboards. All SlimKey-MD medical keyboards are compatible with any commonly used hospital cleaning agent. For space saving, the SLK-101 medical keyboard is housed in a compact ABS polycarbonate case, and features a 10-key numeric pad. The SLK-101-FL medical keyboard is available in PS/2 or single cable USB.
