

Multifunctional Open Surgery Light

The VersaLight[®] is a single-use surgical device that provides a unique combination of features for gynecological, general, colorectal, plastic, and a range of other surgical procedures. Ergonomically designed for comfort in any hand position, this device can be inserted directly into deep cavities, small openings, under flaps, or in lateral margins. It helps to access, visualize, irrigate, and clear the surgical site while saving operative time, space, and cost. VersaLight is the first device of its kind to illuminate, irrigate, aspirate and provide moderate blunt retraction all in one compact, easy-to-use instrument. It attaches to existing OR equipment, requires no capital investment, and offers a lower cost-per-use.
