Bed Rails

The Lumex[®] Low Universal Half Rail assembles quickly and easily without tools. Either side can be placed in the up position to define the edge of the bed space, or the down position to enable patient mobility and linen change. This bed rail was designed for use on homecare beds that adjust to a very low height, but can also be used on standard homecare beds. The Low Universal Half Rail conforms to current FDA safety guidelines and medical equipment safety standards. It meets the requirements of HCPCS code E0305 and includes a three-year warranty.
