

Bendable IV Arm Board

Published on Surgical Products (<http://www.surgicalproductsmag.com>)

Bendable IV Arm Board

The Dale® Bendable ArmBoard for stabilizing and securing IV and arterial lines can be bent and re-shaped many times and has a soft, padded cover for comfortably holding a patient's wrist in any desired position. Featuring two soft elasticized straps that attach using Velcro®, this all-in-one system eliminates taping and allows easy access to the radial artery. Providing clinicians with a quick, tape-free application, the arm board minimizes any undesirable movement that could dislodge the arterial or peripheral line. This compact, latex-free positioning system is easy to adjust and available in three sizes: large for most adults, medium for small adults and geriatric use, and small for infants and pediatrics.
