

Digital Flexible Ureteroscope

The Invisio® digital visualization technology platform has been enhanced with the release of the new DUR®-D Digital Flexible Ureteroscope. The DUR-D Ureteroscope provides a significantly larger image with superior clarity. Featuring a patented, ultra-miniature CMOS distal imaging sensor and a built-in, cool LED light source, the DUR-D Ureteroscope delivers freedom from bulky external accessories. By decreasing the number of components the cost of ownership and maintenance is greatly reduced. This is a simple, convenient “plug & play” endoscopy system with optimal image quality.
