

## Liquid-Proof Computer Equipment

In response to rising concerns about hospital acquired infections as it relates to the recent shift to electronic records, iKey has developed a series of cleanable medical keyboards and a mouse designed to reduce cross contamination. The new liquid-proof keyboards feature low-profile silicon rubber keys that can withstand bleach cleaning, and are easily sprayed or wiped down for complete disinfection. For low-light environments, the keyboards are conveniently backlit. They are ideal for OR's, patient rooms, carts, ICU's and retractable workstations.
