Lithotomy Blanket

The BAIR HUGGER[®] MODEL 585 Lithotomy Underbody Blanket offers a new approach to warming patients undergoing procedures involving the pelvic cavity, including C-sections, colorectal surgery, TURPs and others requiring peritoneal, abdominal or low limb access. The blanket is designed to be positioned on the procedure table before the patient even arrives. This unique design provides a practical, high performance forced-air warming solution that meets patient prep and positioning requirements, allows unrestricted access to the patient and warms effectively in high and low lithotomy positions as well as supine positioning.
