

Support for Wall Mounted Toilets

The "Titan" support is engineered to increase the weight capacity of wall mounted toilets from 350 pounds to over 1000 pounds, allowing bariatric surgical facilities to protect clients from accidents and the facilities from costly repair. The "Titan" works in conjunction with existing wall mounted toilet systems, letting the system to "flex" as originally designed, yet providing additional support as needed. The exterior is made of durable Acetal which is non-corrosive, non-absorbing and will not crack or chip. It withstands the harshest chemicals found in typical commercial cleaning agents. With its unique clean design, offering a minimal surface area and a 2-inch diameter footprint, risk of nosocomial infections is greatly reduced.
