

Videoendoscopes for GI Surgery

The new Flexible Videoendoscopes are specifically designed for gastrointestinal surgical procedures. In the OR, these videoendoscopes provide superior image quality while extending system functionality and enhancing the capabilities of GI surgeons. The scopes offer improved depth of field and high-resolution true color images, as well as easy-to-operate controls and enhanced viewing capabilities. Using the latest digital technology, the Flexible Videoendoscopes offer surgeons an ideal imaging solution for a range of laparoscopic GI procedures, from bariatric surgery and bowel resections to Nissen funduplications.
