## Wrist Splints

Black Perf Wrist Splints for injured or weak wrists are available in 8- and 10-inch lengths. These wrist splints feature a slip on design for easy application and a malleable metal palmar stay for extra support. The splints do not extend past the palmar crease, which allows for a full range of finger motion. The Perf Splints feature a flannel-lined, suede perforated material for maximum comfort. They also offer two forearm straps for compression and support, a sewn-in dorsal stay for immobilization and an adjustable thumb strap to reduce irritation. Both lengths are available in retail packaging, are available in right- or left-hand orientations and are offered in a variety of wrist circumference sizes.
