

Fiberoptic Retractor Light

The Omni-Bright[®] light is a single-use, fiber optic cable that clips easily to any retractor, be it hand-held or table-mounted. With a ten-foot cable, the light positions (and repositions) easily during surgery providing supplemental light precisely where needed. Open procedures that benefit from increased visualization include spine, vascular, cosmetic, orthopedic, gynecological and general surgery. The light connects to any of four light sources commonly available in operating rooms: ACMI, Storz, Wolf and Olympus.
