

Focusable Surgical Lighting

Stellar ST2323 Surgical Lighting provides surgeon control with advanced, high intensity focusable optics (260,000 lux) and soft white lighting delivered where it is needed most without glare. The lighting system's advanced VSRD (Vertical Segmented Reflector Design) Optics provide extended depth of field for even the deepest cavities and cool, shadow free illumination for every procedure. A portable handle camera and low light LED SkyLight for darkened rooms are also optionally available.
