## Spinal Surgery Table Extension

The Allen&reg Spinal System attaches to an existing OR table, providing an advanced spinal platform for a fraction of the cost of a standard spinal table. The system's carbon fiber frame provides unhindered C-Arm access. The Wing Sets and C-Prone Head Positioner are designed to manage skin integrity issues and adjust for a customized fit for each patient. Power from the OR table allows adjustment of the patient from a position of reverse lordosis to extreme lordosis intraoperatively. These features help accelerate advanced spine procedures such as the XLIF. Set-up is simple with three easy steps locking the system into place.
