

MRI-Compatible Lighting Solutions

Sunnex has recently released a detailed brochure highlighting its line of MRI-compatible lighting solutions including the Celestial Star[®] MRI surgical light and the PF MRI examination light. Constructed with a unique combination of nonmagnetic materials, these MRI-compatible lights are unaffected by the magnetism associated with MRI procedures, making them ideal for use in imaging centers, radiology departments and CAT/PET scan labs. These MRI lights are certified by both GE and Siemens for use with their equipment.
