

Transport & Specialty Stretchers

Designed for mobility, comfort and quality, Hill-Rom's line of transport and specialty stretchers addresses patient and caregiver needs with a variety of optional features and accessories. The stretchers boast a 700-pound weight capacity and a built-in scale, available on the procedural, trauma and electric stretchers, allows patients to be weighed without removing them from the stretcher. A five-inch air mattress keeps patients more comfortable while the Auto Contour[®] and BackSaver Fowler[®] features assist caregivers in raising and lowering the head section and help keep patients safely in position. The stretchers also feature an active hand brake to help caregivers easily and ergonomically negotiate ramps and corners and assure safe, easy stops.
