

Trauma Support Carts

The MetroBasix Plus[®] Procedure cart incorporates the combination of a strong steel shell, lightweight aluminum drawers, tough polymer base and an ergonomic work surface. The shell of the cart is not compromised with pre-punched holes for mounting accessories; holes that can help the spread of infection. This feature allows for quick cleanup in the emergency department where time is crucial. Another benefit to the ED is the MetroBasix Plus Trauma Support accessory package. This package provides ample storage with side bins and overbridge bins, a top shelf for equipment, glove box holder and an outlet strip to consolidate equipment cords.
