Biopsy Probe Cover

The CIV-Flex[®] Mammotome Cover is specifically designed for use with the new version of the Mammotome EX biopsy probe and the Mammotome Hand-Held Holster. The cover provides a sterile, latex-free field during breast biopsies. The Mammotome system is a minimally invasive, highly accurate product for helping doctors diagnose breast cancer at the early stages. The custom designed cover serves a dual purpose, offering a clear covering for easy identification and manipulation of the controls while also reducing contaminants such as blood or fluid from getting into the control buttons located on the probe.
