

## Image Capture System

The MediCap<sup>®</sup> USB150 instantly captures digital images from virtually any video source including ultrasounds, endoscopes, arthroscopes, surgical cameras and C-Arms. Images are saved to a removable flash drive. When the imaging session is complete, the flash drive can be inserted in the USB connector of any Windows<sup>®</sup> computer where the images can be easily archived, emailed or enhanced. The USB150 is simple to connect and operate and supports JPG, BMP, and DICOM image formats. A built-in LCD monitor aids navigation and confirms image capture.
