

# Instrument Cleaning Pre-Treatment Foam

Prezyme<sup>®</sup> X.F. provides a thick, long lasting enzymatic foam that keeps soiled instruments moist and begins breaking down blood, fat, carbohydrates, starches and protein prior to decontamination. This instrument prep foam makes cleaning easier and helps speed up turnaround time by preventing bioburden from drying on the surface of instruments. The Applicator Spray Tip is designed to reach into cannulas and lumens, providing a deeper more thorough cleaning. Prezyme X.F. is an alternative to water based solutions that cause rust after prolonged soaking of instruments.
