

Safety Power Supply Panel

The XTL Panel isolated power supply provides vital, safe power to surgical lasers and X-ray systems with a special design that energizes with one simple motion, locking power on until the procedure is complete. Many existing OR power supplies cannot handle simultaneous X-ray or laser procedures and older panels may carry the risk of being accidentally shut off. By upgrading to an XTL panel, these problems are solved with a unique design that prevents the overloading of power systems and accidental shutoff.
