

Storage System

The HD qwikTRAK® Storage System is a high-density solution that can increase a facility's storage space by up to 40 percent in the same footprint. The system's mobile shelving units roll smoothly and easily on low-profile floor tracks. Designed for heavy-duty loads, it can hold up to 2000 pounds. The system consists of end, intermediate and mobile unit kits which can be easily lengthened, shortened or disassembled and moved as storage is needed. The qwikTRAK is available with Metro's Super Adjustable Super Erecta wire, MetroMax Q or MetroMax shelving systems.
