Accessory Clamp

The Easy Lock Socket eliminates many problems associated with attaching accessory clamps to surgical tables because it can be attached anywhere along the rail, even if the rail end or notches are not accessible. The Easy Lock Socket attaches by simply placing the clamp edge over the top of the side rail and pivoting downward to engage the spring-loaded trigger lock. It is an excellent replacement option for worn or broken Clark sockets and accepts any round post up to 11/16 inch (1.8 cm).
