

Devices for Open & Laparoscopic Procedures

Booth # 607 Automated Medical Products designed and developed the first Articulating Dissector to place a Lap Band[®] around the esophageal junction with the stomach. They introduced Nathanson Hooks Liver Retractors to the United States for use during laparoscopic procedures. Automated Medical offers the Iron Intern[®] retractor holder, available in a single and a double arm. It provides versatility, excellent exposure and stable locked-in position. The Iron Intern has become the leader in bariatric surgery, both laparoscopic and open procedures.
