

Surgical & Imaging Table

The EZ Slide 3501B top slide surgical table provides 21-inch top slide with the precision positioning of an imaging table, significantly reducing patient set-up times, the need to reverse patients and/or use of time consuming special positioning devices. The table provides excellent imaging flexibility and an impressively versatile range of full body imaging and articulation functions for general purpose and specialty surgical procedures, including powerful 700-pound lift and 600-pound articulation capacity. A durable, back-lit pendant control for low lighting environments is easily used from any location around the table's perimeter.
