

Excimer Laser Ablation System

The TURBO elite excimer laser ablation system vaporizes lipid-based, calcified and fibrotic plaque as well as neointimal hyperplasia. Further, it incorporates all of the features of the TURBO product line, including 80 hertz laser repetition rates, "continuous on" lasing and a hydrophilic coating. The TURBO elite catheters are available in a variety of sizes, featuring an enhanced outer jacket and inner guide wire lumen with optimized ablation efficiency and energy output that enables increased penetration rates.
