## Fiberoptic Light Source

The XLS-300 300-Watt elliptical xenon lamp maximizes visualization with the high-powered illumination. It provides constant color temperature for accurate color reproduction. The evenly distributed beam profile reduces shadows and hot spots, while the high-intensity, 2000 lumen light output delivers brighter, more accurate images. The lamp module is easily replaceable through a side door and requires no tools. The LCD on the front control panel displays brightness, output percentage and lamp hours used.
