Ultrasound Table

The Ultra Pro Ultrasound Table can be used for all general ultrasound procedures including OB/GYN. Ergonomically designed to suit both the patient and sonographer, the table provides safety and comfort to provide the best image possible. There are no barriers between sonographer and patient, allowing correct scanning posture to prevent musculoskeletal injury. The table's 500-pound patient capacity and power Fowler back make this table perfect for certain types of high-risk pregnancies. The power Fowler back provides comfort for the patient allowing them to sit up to an 80-degree angle, while the sonographer benefits from the motor-controlled adjustments. With a vast height range down to 23", the Ultra Pro easily accommodates wheelchair transfers and patients with ambulatory difficulties. The table is also offered with optional retractable stirrups made for pelvic studies.
