

Video, Data & Communications Control System

The SkyVision Advanced Video, Data and Communications Control System is easy to install and features a flexible open architecture design for incorporation into OR Integration Design. It provides vendor-neutral solutions, easy to use software and simple touchscreen control over multi-source video and data. The system can be configured to control and integrate MIS images, in-room and surgical light cameras, PACS, C-Arm, microscopes, H.I.S, Internet, radiology, medical records, teleconferencing and more. SkyVision provides convenient access, routing and integration of key support equipment within and outside the Operating Room, powered by GDM.
