

Urology Laser

The EVOLVE SLV[®] office use surgical laser system utilizes contact tissue vaporization, producing immediate relief not found with older minimally invasive technologies such as Microwave and Radio Frequency. The highly portable system produces up to 120 watts of power delivered through an optical fiber, and draws 110 Volts from standard power outlets, making it suitable for use in a physician's office or OR. The laser recently received clearance for use in treating benign prostatic hyperplasia (BPH), adding to its other soft tissue uses, including bladder tumors, condylomas, the removal of cysts, and warts.
