## **Bipolar Metzenbaum Scissors**

The PL700 Ceramic Bladed Bipolar Metzenbaum Scissors combine ceramic bladed scissors technology and safe bipolar energy for superior cutting and sealing of tissue bundles and vessels in one step. The Metzenbaum style ceramic blade provides a self sharpening action to provide a superior, long-lasting, high performance cut in both the cold and energy mode. The bipolar technology of the PL700 delivers controlled and precise energy directly to the desired tissue and/or vessels. This results in effective hemostasis with limited lateral thermal spread. The universal design is compatible with all bipolar electro-surgical units.
