Inventory Storage & Stocking Program

The Sunoptics Surgical Stocking Inventory Program helps hospitals to effectively store cables and adapters and maintain inventory levels. Sunoptics provides a locked box to the Hospital free of charge that contains an assortment of the hospital's choice of universal fiber optic cables or custom endoscopic cables. The hospital may also add an assortment of headlight cables of all manufacturers' types. The box can hold up to 10 cables and 20 adapters if using universal cables. The hospital assigns one person a key to the box, while the sales rep has a second key, thus controlling access. Monthly the sales rep takes inventory and the hospital issues an order that brings inventory back to initial inventory levels. This stocking programs can save the hospital over 25 percent on cable purchases.
