

Laser Ablation Treatment System

The Turbo-BOOSTER is the first laser ablation treatment FDA-approved to clear blockages in arteries above the knee. The treatment system can be used to treat peripheral artery disease (PAD), which often occurs in the arteries above the knee. This minimally invasive laser treatment can be performed quickly (usually in one to two hours) and painlessly. It also requires less recovery time than other treatment options, with patients returning to normal activity in a matter of days.
