

Safety Syringe with Write-On Stripe

To help address the many challenges associated with medication errors and syringe labeling,[DGP1] Inviro Medical Devices has added an integral write-on stripe, InviroSTRIBE[®], to its complete line of manually retractable InviroSNAP![®] Safety Syringes. This innovative feature enables healthcare workers to record critical information directly onto the syringe barrel or provides a consistent location for pre-printed labels, thus helping to reduce risks for injectable medication errors and meeting the 2007, and recently announced 2008, Joint Commission medication labeling requirements. The patented white stripe makes it easy for those administering medication to eliminate problems commonly experienced with current labeling practices, including the use of stick-on labels.
