

Automated Disinfector for TEE Probes

The TD-100 automated disinfector is specifically designed for transesophageal (TEE) probes. It has FDA-510k clearance and has been approved for use by Philips Medical, Siemens Medical and GE HealthCare. The TD-100 disinfects and rinses probes in just 15 minutes and is extremely easy to use. After pre-cleaning, simply insert the probe, follow the display prompts and walk away. A gentle beeping signals the completed cycle and the TD-100 will generate a printed verification that the probe has been successfully disinfected and rinsed.
