Fluid Control Floor Mat

BASS Medical has added the BASS “FIN” to its line of fluid control products. The BASS Fluid Control System is used for arthroscopies and other “wet” procedures to keep the Operating Room floor dry. The BASS “FIN” is a smaller (22-inch by 16-inch) version of the BASS without suction. It can attach to the BASS to form an L-shape in order to keep fluid off the floor during lateral and beach chair positioned arthroscopies or can be used by itself anywhere fluid control is needed.
