

## General & Bariatric Surgical Table

The mobile TRUMPF MARS surgical table is designed to deliver flexibility and efficiency. Its 790-pound patient weight capacity, extreme low height adjustment and stability at extreme angles meet the needs of bariatric surgery, while its full articulation and modularity allow easy and optimal patient positioning for virtually all general and specialized procedures. TRUMPF's interchangeable modular table components include a fully range of carbon fiber accessories which, along with the MARS's 9.8 inches of longitudinal slide, head-to-toe X-ray channel and 100 percent C-arm access, allow unrestricted intra-operative imaging.
