

Patient Transport Chair

The TM5X Surgi-Chair II combines a mobile surgical platform with the flexibility of working as a chair. Its battery-powered, motorized positioning allows patient transport from pre-op to procedure to post-op without patient transfer, reducing if not eliminating occupational injuries. The TM5X Surgi-Chair II features effortless push button positioning of powered seat tilt, Trendelenburgs, height adjustment of 23 inches to 39 inches and full recline to a 24-inch by 76-inch patient surface. This mobile surgery stretcher chair also offers a very low profile articulating head piece and a 500-pound weight capacity.
