Medical Grade DVD Recorder

Sony's DVO-1000MD is a medical grade DVD recorder that features a built in 80 Gigabyte hard drive that can store up to 30 hours of video. Its two exclusive features, DVORECOVERY[™] which enables the end user to re-capture lost video due to an accidental power outage and DVOfAST[™] that enables users to remove a recorded disk in less than 2 minutes with no finalization requirement, makes the DVO-1000MD extremely user-friendly. Employing industry standard MPEG 2 video compression, this DVD recorder captures images with exceptional clarity.
