

Disposable Patient Transfer Sheet

The ezGlide[®] is a disposable patient transfer sheet that is used like a roller or flat board, without the lifting. Being disposable and designed for single patient use, this device eliminates the need to clean and sanitize a board after each patient use and decreases the risk of infection. The ezGlide[™] is always available, with a wall mounted dispenser. There is never a static issue with the ezGlide[™] and it is also latex free. Complimentary samples and educational DVDs are available from Sloan Medical.
