Luer Lock Syringe

The Inviro Luer Lock Syringe with InviroSTRIPE protects patients by helping to reduce medication labeling errors. It is compatible with split septum and IV injection sites. The revolutionary integral write-on stripe allows annotation of critical information to be recorded directly onto the syringe barrel and enhances visibility of gradations. In addition to helping to address The Joint Commission's medication labeling requirements, the write-on stripe provides consistent placement for pre-printed labels and eliminates the costs associated with labels.
