

Skytron's patented Wireless RFID Asset Manager

Skytron's new patented wireless RFID Asset Tracking Manager, powered by Awarepoint, is specifically designed for hospital facilities to deliver instant Return On Investment (ROI) within an easy to install, fully managed service. Skytron Asset Manager delivers 1-3 meter real time location accuracy via patented 'plug and track' sensors that permit simple installation in a just a few days (vs. months) with minimal infrastructure costs or training requirements. Once installed, the wireless system establishes a secure, independent and self calibrating wireless mesh network that offers significant efficiencies, including self healing, low maintenance real time asset monitoring, active alerting, reporting and analysis. Skytron Asset Manager permits easy 3rd Party integration to existing hospital networks, including robust reporting and analysis tools that significantly enhance equipment utilization while providing real-time reporting of actionable information to effectively improve business practices that impact patient care and operational efficiency. Map, Monitor, Measure, Improve!
