

Surgical Gowns with Fluid Contamination Protection

Secure-Fit is a patented technology designed to protect caregivers from fluid contamination that can result from glove slip-down during surgery. Caregivers can feel confident that they are wearing a surgical gown with Secure-Fit because of its visually distinctive deep blue coloration on sleeve of select the company's ULTRA Non-Reinforced and MICROCOOL surgical gowns. Designed to work with market-leading surgical gloves, Secure-Fit maintains the comfort, flammability-resistance and low-linting properties that caregivers expect from Kimberly-Clark surgical gowns.
