

Teleflex Medical

can repair all brands and models of general and other specialty reusable stainless steel surgical instruments, pneumatic and electric power tools and accessories, rigid and flexible endoscopes, video cameras and accessories, light sources and fiber optic instruments, and much more. A majority of these repairs are done within 48 hours for factory-based mail-in repairs, but Teleflex also offers a van-based repair service and their innovative InSite repair service. The cost-effective and convenient InSite repair program involves the installation of a fully equipped repair laboratory on hospital premises, staffed with one of Teleflex's highly trained, certified repair technicians on a full-time basis.
